NARRATIVE

The purpose of this survey was to locate the described boundary on the ground and monument the corners. The Section Corner monuments found were both intact buried 4 to 6 inches below the existing surface. Section 8 is an irregular shaped section, the center of section does not appear to have ever been monumented and the W_{1/2} has been monumented in at least two different locations between 1989 and 2023. I believe this irregularity has caused some inconsistencies between the record deed descriptions and the existing occupation lines and the other recent surveys performed in the immediate area. The control for this survey is the measured section line that runs along 4300 West and the calculated centerline of 700 North. The section line is easily measured between the existing section corner monuments. The centerline of 700 North has been established using the metes and bounds from the Weber County Monument Positions measured 11/06/89. I found that the computed position of the east 1/4 of section 8 establishes a quarter section line that fits both the Debra Robinson subdivisions and the Landmark survey of 2008. The calculated centerline of 700 North does differ from the record bearings line between the found E 1/4 of section 8 and the SW corner. I went the record bearing and distance from the found E 1/4 Corner monument to establish the record point of beginning and set a rebar and cap. To establish the point of beginning I went Westerly along the calculated centerline of 700 North 33'; then South parallel to the section line 33' and set a rebar and cap. Then from the point of beginning we along the 33' offset line of the section line the record distance and arrived very near an existing fence post. I then set a rebar and cap 1' to the east due to refusal at the actual corner. From the Southeast corner I went Westerly along an existing fence the record distance along a bearing that was coincident with the Landmark Survey of 2008, at the corner I found no monument from the 2008 Landmark survey. I then set a rebar and cap 1' to the West of the actual corner due to refusal at the actual Southwest corner. I then went Northerly along the existing fence and stopped short of the record distance at an offset distance of 33' from the calculate Centerline of 700 North and set a rebar and cap. I then went Easterly along the calculated South line of 700 North the record distance and closed on the point of beginning.
